

LOW-TICKET META ADS SETUP

The Client Ready Funnel Methodology

Michael Scott | The Client Ready System

Introduction: Why This Approach Works

Look, I'm going to be direct with you.

Most coaches spend months posting organic content hoping clients will magically appear. They follow the guru advice: "Just add more value!" "Show up consistently!" "Build your audience!"

And they're still broke three years later.

Here's what nobody tells you: organic content is a hope-based strategy. You're hoping the algorithm favors you. Hoping people see your posts. Hoping they click. Hoping they eventually buy.

That's too much hoping and not enough engineering.

The low-ticket Meta ads approach gives you something organic never will: binary feedback in 48-72 hours. You know fast if your offer resonates. You know if your messaging lands. You know if people will actually pay to solve the problem you're addressing.

This is the test-validate-build engineering methodology applied to coaching businesses. Don't build expensive infrastructure before you know if it works. Start with low-ticket validation that proves market demand, then scale from proven ground.

Someone who pays even \$7 has proven they'll invest to solve their problem. They have *skin in the game*. That's different from someone collecting free content they'll never use.

The Philosophy: Test Before You Build

In civil engineering, you don't construct a bridge before testing the foundation. You don't build infrastructure on untested assumptions.

Same principle applies to coaching businesses.

The typical coach builds backwards. They create a \$2,000 program, spend weeks on the curriculum, design fancy slides, build out modules ... and then discover nobody wants to buy it.

That's building first, validating never.

The Client Ready methodology flips this:

1. **Test with low-ticket offer (\$7-\$27) to prove people will pay**
2. **Validate positioning and messaging through paid traffic data**
3. **Build full infrastructure only AFTER validation proves it works**

This approach does three things simultaneously:

- Reduces risk (you're not investing months before knowing if it sells)
- Generates leads profitably (self-liquidating funnel covers ad costs)
- Creates natural ascension path (proven buyers want more support)

The low-ticket offer isn't just a product. It's a qualifying mechanism. It separates people who'll invest from freebie seekers. And it gives you binary feedback fast.

Why Meta Ads (Not TikTok, Not YouTube)

You could run ads on TikTok, YouTube, Google ... so why Meta?

Three reasons:

1. **Facebook's targeting is unmatched for coaches.** You can target people interested in life coaching, personal development, entrepreneurship, specific coaching methodologies. The platform knows who's a coach struggling to get clients.
2. **The conversion infrastructure is built in.** Landing page to checkout happens on your site, but Meta's pixel tracks everything. You get data on who's buying, what demographics convert, which creative works.
3. **Starting budget is accessible.** \$30-50/day gets you meaningful data. That's \$900-\$1,500/month. Most coaches at years 2-5 can swing that if they're serious about validation.

TikTok ads work for consumer products and younger demographics. YouTube ads work for high-intent search traffic. Google Search works when people already know what they want.

But Meta is where coaches hang out. Where they scroll during downtime. Where they're most receptive to seeing solutions to their exact struggle. That's why we start here.

The Front-End Offer: What Makes It Convert

Your front-end offer is the linchpin of this entire system.

Get this wrong and nothing else matters. Get it right and you've built a self-liquidating lead generation machine that funds itself while proving your business model works.

Price Point: \$15-\$27

Not \$7 (too cheap, attracts freebie seekers). Not \$97 (too expensive for cold traffic validation). The \$15-27 range is the sweet spot where serious buyers say yes without overthinking.

For The Client Ready System, the front-end is \$15. That's deliberate. It's low enough that qualified coaches don't hesitate. High enough that it filters out people just clicking around.

The One Problem Rule

Your offer must solve ONE burning problem. Not three problems. Not "everything you need to succeed." One specific pain point your ideal client is desperate to solve.

For my offer, that problem is: "I help everyone with everything" confused positioning. Coaches 2-5 years in who can't articulate what makes them different. Who sound like every other coach when they explain their business.

The Client Ready Offer Extraction solves exactly that. In 60-90 minutes using AI prompts, they get clarity on their zone of genius and a focused offer they can actually sell.

That's it. One problem. One solution. Crystal clear.

Delivery Format Matters

Digital delivery only. No physical products, no shipping logistics, no fulfillment headaches.

The best formats for low-ticket validation:

- **AI prompts and frameworks (Google Docs)**
- **Video walkthrough tutorials (Vimeo)**
- **Templates and swipe files (Canva, Docs)**
- **Mini-workshops or recorded trainings (1-2 hours max)**

Keep it simple. Instant access via email. No membership site complexity at this stage. Just deliver the value fast and let them experience results.

Order Bumps: The Profit Amplifier

An order bump is an add-on offer presented at checkout with a single checkbox. Takes zero additional friction to add. And it can increase your average order value by 30-70%.

Pricing: \$17-\$37 range. Impulse-purchase level.

The key: order bumps should AMPLIFY the main offer results. Not solve a different problem. Not distract from the core transformation. They should make the main offer work better or faster.

For Client Ready System:

- Order Bump 1: AI Digital Prompt Extraction (\$33) - Additional prompts that amplify the offer extraction process
- Order Bump 2: 3 Proven 6-Figure Offer Templates (\$24) - Battle-tested frameworks to implement faster

Technical Setup: Meta Ads Manager

Now we get into the actual setup. This is where most coaches get lost in the technical weeds. I'm going to walk you through this systematically.

Step 1: Business Manager Setup

If you don't have a Facebook Business Manager account, create one at business.facebook.com. This is separate from your personal Facebook account.

Why Business Manager and not just boosting posts? Because you need:

- Access to detailed conversion tracking
- Ability to run proper conversion campaigns
- Advanced targeting options
- Data that actually helps you optimize

Boosting posts is for amateurs. Business Manager is for people serious about validation.

Step 2: Meta Pixel Installation

The Meta Pixel is a piece of code that goes on your website and tracks everything: page views, add to cart, purchases. Without it, you're flying blind.

For GoHighLevel (my recommended platform):

1. Go to Events Manager in Business Manager
2. Create a new Pixel
3. Copy the Pixel ID
4. In GHL, go to Settings > Tracking Code > Add the Pixel ID

GHL automatically handles the event tracking (PageView, AddToCart, Purchase). You don't need to manually code events unless you're using custom funnels outside GHL.

Step 3: Conversion API Setup (CRITICAL)

iOS 14.5 broke pixel tracking. People can now opt out of tracking. That means your pixel only sees 60-70% of actual conversions.

The Conversions API (CAPI) solves this by sending conversion data directly from your server to Meta. No reliance on browser tracking.

For GHL users, this is built in. Just enable it in settings.

For everyone else: you'll need to set up server-side tracking through your funnel platform or use Zapier to send purchase events to Meta. This is non-negotiable. Without CAPI, your data is incomplete and Meta can't optimize properly.

Step 4: Payment Processor Connection

You need a way to accept payments. Stripe is the standard. PayPal works but has more restrictions.

Connect your payment processor to your funnel platform (GHL, ClickFunnels, whatever you're using). Test the full flow: landing page → checkout → purchase confirmation.

Don't skip the test purchase. Too many coaches launch ads and discover their checkout page is broken. Test with a real payment. Refund yourself if needed. But TEST.

Campaign Structure: The Three-Level System

Meta ads are organized in three levels: Campaign, Ad Set, and Ad. Understanding this structure matters because you optimize at different levels.

Campaign Level: The Objective

This is where you tell Meta what you want: traffic, conversions, engagement, whatever.

For low-ticket offers, always use: Sales (Conversions)

Don't use Traffic objective. Don't use Engagement. You want purchases, not clicks or likes. Tell Meta to optimize for purchases from the start.

Campaign Budget Optimization (CBO): OFF

CBO lets Meta distribute your budget across ad sets automatically. We don't want this. We want to control ad spend at the ad set level

Ad Set Level: Who Sees Your Ads

This is where you define targeting, budget (if not using CBO), and placement.

Targeting Strategy for Coaches:

Start BROAD. I know every guru tells you to niche down and target super specifically. Wrong.

Meta's algorithm is better at finding buyers than you are at manually selecting interests. Give it room to work.

Initial Targeting Setup:

- **Location:** United States, Canada, UK, Australia (Tier 1 countries)
- **Age:** 30-55 (prime coaching demographic)
- **Gender:** All (unless your offer is gender-specific)
- **Detailed Targeting:** Life coaching, Personal development, Entrepreneurship, Tony Robbins, Brendon Burchard
- **Advantage+ Audience:** ON (lets Meta expand beyond your targeting)

This gives you an audience of roughly 15-30 million people. That's not too narrow. You want volume for Meta's algorithm to find patterns.

Placements: Advantage+ Placements

Let Meta decide where to show your ads. Facebook feed, Instagram feed, Stories, Reels ... it'll optimize toward what converts.

Manual placements come later when you have data showing specific placements work better.

Ad Level: The Creative

This is what people actually see: the image, the copy, the headline, the call-to-action.

We'll cover creative strategy in detail in the next section. For now, understand this is where you test variations to see what resonates.

Creative Strategy: What Makes Ads Convert

Your creative is 80% of whether your ads work. Not targeting. Not budget. Not campaign structure.

The creative.

If your ad doesn't stop the scroll and make your ideal client say "This is exactly my problem," nothing else matters.

The Triple Hook Method

This is the copywriting framework that consistently converts for coaching offers.

Hook 1: The Premise with Numbers

Start with a bold statement that includes specific numbers or timeframes. This creates a pattern interrupt.

Examples:

- "From zero to complete offer in 24 hours using AI"
- "3 years into coaching and still no consistent clients?"
- "\$50K invested in coaching programs but you're still stuck at \$2K months?"

Hook 2: The Stakes

Amplify why this matters. Make it visceral. What's the cost of staying stuck?

Examples:

- "The longer you stay confused about positioning, the more clients go to coaches who've figured it out"
- "Every month posting content that doesn't convert is another month you could have been getting paid"
- "You're one failed launch away from giving up completely"

Hook 3: The Pattern Interrupt

Challenge conventional wisdom. Offer a counter-cultural insight. Make them curious.

Examples:

- "What if the problem isn't your niche ... it's that you're building someone else's business?"
- "Stop trying to help everyone with everything. Extract your ONE unfair advantage instead."
- "The coaches making \$10K/month aren't posting more content. They're validating faster."

Put these three hooks together and you have ad copy that stops the scroll, creates urgency, and generates curiosity.

Image Creative: Simple Beats Fancy

You don't need a professional designer. You need images that reinforce your message and look native to the platform.

What works for coaching offers:

- Text overlays with bold headlines (use Canva)
- Screenshots of results or frameworks
- Simple graphics with problem/solution messaging
- Your face (yes, personal brand matters)

What doesn't work:

- Generic stock photos of people in business suits
- Overly designed graphics that look like ads
- Anything that screams "I'm trying too hard"

Create 5 image variations using Canva. Same core message, different visual treatments. Let Meta test what resonates.

The Headline and Description

Headline (40 characters max): Direct benefit or outcome

"Stop Helping Everyone With Everything"

"Build Your Offer in 24 Hours"

"Extract Your Zone of Genius"

Description: Expand on the primary text. Reinforce the transformation.

Keep it short. Three sentences max. Don't repeat what's already in the primary text.

Call-to-Action Button

"Learn More" or "Shop Now" for e-commerce offers.

Don't overthink this. The button matters less than the copy and creative. But "Learn More" generally performs best for coaching offers because it's low-commitment.

Budget and Bidding: Starting Smart

Most coaches either spend too little (no data) or too much (burn cash before learning). Here's the strategic approach.

Starting Daily Budget: \$30-50

This is the minimum to get meaningful data within 3-5 days. Below \$30/day, you won't get enough volume for Meta to optimize properly.

At \$30/day for a \$15 offer, you need roughly 2 sales per day to break even (assuming 30-40% take rate on order bumps).

That's not the goal yet. The goal is DATA. Can you get qualified traffic? Do people click? Do they add to cart? Do they purchase?

Run \$30-50/day for minimum 5-7 days before making big decisions. That's \$150-350 total spend. Most coaches can afford that for validation.

Bidding Strategy: Highest Volume

When setting up your campaign, Meta will ask how you want to bid. Choose "Highest Volume" (formerly called automatic bidding).

This tells Meta: "Get me as many purchases as possible within my budget."

Don't use cost cap or bid cap strategies yet. Those are for when you have data and know your target CPA. Starting out, let Meta figure it out.

When to Increase Budget

Only scale when you're profitable or close to break-even.

If you're spending \$50/day and getting 3-4 sales (\$45-60 revenue before order bumps), you're in the validation zone.

At that point, increase budget by 20-30% every 3-4 days:

- Day 1-5: \$50/day
- Day 6-9: \$65/day
- Day 10-13: \$85/day
- Day 14+: \$100/day

Don't jump from \$50 to \$200 overnight. Meta needs time to stabilize after budget increases. Gradual scaling maintains performance.

What If You're Not Breaking Even?

If you're spending \$50/day and only getting 1 sale, you're losing money. That's \$350/week for 7 sales = \$105 revenue (before order bumps).

Don't panic. Don't immediately turn off ads. This is still valuable data.

Ask:

- Are people clicking? (If yes, creative is working)

- Are they adding to cart? (If yes, they're interested)
- Are they completing purchase? (If no, checkout issue or price resistance)

If clicks are low: creative problem. Test new hooks and images.

If add-to-cart is high but purchases low: landing page or checkout problem. Simplify the process.

The data tells you where to fix. Don't just throw more money at a broken system. Diagnose first, then optimize.

Reading the Data: What Metrics Actually Matter

Meta Ads Manager shows you hundreds of metrics. Most are noise. Here are the ones that matter for low-ticket validation.

Primary Metrics (Check Daily)

1. Cost Per Purchase (CPP)

This is your most important metric. How much are you spending to get one sale?

Target for \$15 offer: \$30-45 CPP

That's 2-3x the product price. At this rate, you're breaking even or slightly profitable once you factor in order bumps.

If your CPP is \$60+, you're losing money. Time to optimize.

2. Click-Through Rate (CTR)

Percentage of people who see your ad and click.

Target: 2-4% Link CTR

Below 1% = creative problem. Your ad isn't stopping the scroll.

Above 4% = strong creative. People are engaged.

3. Landing Page Conversion Rate

Percentage of clicks that turn into purchases.

Target: 8-15% conversion rate

If 100 people land on your page and 10 buy, that's 10% conversion.

Below 5% = landing page problem. Weak copy, unclear offer, or price resistance.

Above 15% = exceptional. Your messaging is dialed in.

4. Add-to-Cart Rate

How many people click "Buy Now" or add to cart.

If add-to-cart is high (30-40%) but purchases are low, you have a checkout problem. Simplify the process. Remove unnecessary steps. Make payment frictionless.

Secondary Metrics (Check Weekly)

Cost Per Click (CPC): How much each click costs. Target: \$0.50-\$1.50 for coaching niches.

Frequency: How many times the same person sees your ad. Above 3-4 means you're burning out your audience. Time to refresh creative.

Relevance Score: Meta's rating of how well your ad matches your audience. Shoot for 7+.

Metrics That Don't Matter (Ignore These)

- Impressions (who cares how many people scroll past your ad?)
- Reach (doesn't matter if they don't buy)
- Page likes or post engagement (vanity metrics)
- Video views (unless you're running video ads specifically)

Focus on purchases and the path to purchases. Everything else is distraction.

Optimization: Making Good Campaigns Great

Once you have initial data (minimum 20-30 purchases), you can start optimizing systematically.

Creative Testing: The 80% Lever

Your creative is the biggest optimization opportunity. Not targeting. Not budget. Creative.

Test one variable at a time:

- **Hook variation:** Keep image same, change the opening line
- **Image variation:** Keep copy same, change the visual
- **Angle variation:** Pain-focused vs. outcome-focused messaging
- **Format variation:** Static image vs. carousel vs. video

Launch 3-5 variations. Let Meta spend \$100-150 per variation. Kill the losers. Scale the winners.

Landing Page Optimization

If your CTR is good but conversion is low, the problem is your landing page.

Test:

- Headline clarity (does it match the ad?)
- Length (shorter often converts better for low-ticket)
- Bullet points vs. paragraphs
- CTA button placement and copy
- Social proof (testimonials, purchase count)

Make one change at a time. Test for 50-100 visitors minimum before deciding.

Audience Refinement

Once you have 50+ purchases, look at the demographics of buyers:

- Are they mostly women or men?
- What age range converts best?
- Which countries?

You might discover your best buyers are women 35-50 in the US. Great. Create a new ad set targeting that specifically while keeping your broad campaign running.

Don't kill what's working. Layer on refinements.

Retargeting: The Low-Hanging Fruit

After 30 days, you'll have website traffic that didn't buy. These are warm leads. They're cheaper to convert than cold traffic.

Create a custom audience:

- Website visitors (last 30 days)
- EXCLUDE: People who purchased (don't waste money re-targeting buyers)
- Budget: 20-30% of total ad spend

Use different creative for retargeting. Address objections. Offer urgency ("Last chance" / "Offer ends soon"). Show social proof.

Retargeting typically converts 2-3x better than cold traffic at 40-60% lower cost. It's the easiest way to improve overall ROAS.

Troubleshooting: Common Problems and Fixes

You're going to hit issues. Everyone does. Here's how to diagnose and fix the most common problems.

Problem 1: High Spend, No Sales

Symptom: You've spent \$200+ with zero purchases.

Diagnosis:

- **Check CTR:** Below 1% = creative problem
- **Check landing page views:** If people click but bounce immediately = message mismatch
- **Check pixel:** Is it firing? Test a purchase yourself.

Fix:

- If CTR is the issue: Rewrite your hooks. Test new angles. Get more aggressive with the pain.
- If landing page is the issue: Make sure headline matches ad promise. Simplify your offer. Add urgency.
- If pixel is the issue: Reinstall it. Verify events are tracking in Events Manager.

Problem 2: Ads Approved Then Disabled

Symptom: Your ads run for a few hours or days, then Meta disables them for policy violations.

Common violations:

- Income claims ("Make \$10K/month")
- Before/after transformations without disclaimers
- Targeting based on sensitive categories (financial status, health conditions)
- Landing page with aggressive scarcity tactics (countdown timers, "only 3 spots left")

Fix:

Remove all income claims from ads and landing pages. Don't promise results. Focus on the transformation, not the money.

Appeal the decision (often gets overturned if it's a mistake). But fix the actual issue first.

Problem 3: High CPP (Cost Per Purchase)

Symptom: You're getting sales but spending \$80-100 per purchase on a \$15 offer.

Diagnosis:

This means something in your funnel is inefficient. Either creative, landing page, or audience.

Fix:

- **Test new creative** (80% of the time, this is the issue)
- **Shorten landing page** (less scrolling = higher conversion)
- **Add urgency or scarcity** (but don't violate policy)
- **Check audience overlap** (if running multiple ad sets, they might compete)

If you can't get CPP below \$60 after testing, your offer might not be strong enough or your audience isn't big enough. That's valuable data. Don't ignore it.

Problem 4: Learning Phase Never Ends

Symptom: Your campaign stays in "Learning" status for weeks.

Meta needs 50 conversions per ad set per week to exit learning phase. If you're not hitting that, performance will be inconsistent.

Fix:

- Consolidate ad sets (fewer ad sets = more conversions per set)
- Increase budget (more spend = more conversions)
- Use CBO (Campaign Budget Optimization lets Meta distribute budget to what's working)

When to Scale (And When to Pivot)

This is the question everyone asks: "When do I know it's working?"

Here's the truth: you're looking for binary validation, not overnight profitability.

Signs You Should Scale:

4. **CPP is 2-3x product price or better.** For a \$15 offer, that's \$30-45 per purchase.
5. **CTR is consistently 2%+.** People are engaging with your creative.
6. **Order bump take rate is 30-60%.** This pushes you toward profitability.
7. **You've validated with at least 30-50 purchases.** Not 3 sales. Not 10 sales. Minimum 30.

If all four are true, you're in validation territory. Not necessarily profitable yet, but the model works. Now you can scale budget, test ascension to higher-ticket offers, and build out the backend.

Signs You Should Pivot:

4. **CPP is 5x+ product price after 2-3 creative iterations.** If you're spending \$75+ per \$15 sale after testing multiple angles, the offer isn't resonating.
5. **CTR stays below 1% regardless of creative.** Nobody cares about your message.
6. **Landing page conversion is below 3%.** Even interested people aren't buying.
7. **You've spent \$500+ with fewer than 5 sales.** The market is telling you something.

Pivoting doesn't mean you failed. It means you got data fast instead of wasting months on hope-based organic strategies.

Go back to offer extraction. Maybe you're solving the wrong problem. Maybe your positioning needs refinement. Maybe your ideal client definition is off.

That's the beauty of this approach: you find out in days, not years.

Final Thoughts: The Long Game

Look, I'm not going to lie to you and say this is easy.

Running Meta ads requires testing, iteration, and the willingness to spend money on data before you see profit. Most coaches aren't willing to do that. They want guaranteed results before investing.

That's not how validation works.

But here's what this approach gives you that organic never will:

- **Binary feedback in 48-72 hours**
- **Qualified leads who've paid to solve their problem**
- **Data that tells you exactly what to fix**
- **A self-liquidating funnel that funds itself**
- **Proof your business model works before building expensive infrastructure**

This is the engineering approach: test before you build. Validate quickly. Scale from proven ground.

And yeah, you're going to keep your day job while you do this. Not because you're scared or uncommitted. Because desperate energy destroys everything it touches.

Build from abundance. Test systematically. Let the data guide you.

That's how you build a coaching business that actually works.

Not by hoping. By engineering.
